OBJECT : POLYKAR PARTNERS WITH EPI TO LAUNCH LINE OF OXO-DEGRADABLE BAGS

Polykar is pleased to inform its clients that we have partnered with EPI Environmental Products Inc. (EPI) to offer a line of oxo-degradable bags.

Based in Vancouver, British Columbia, EPI is one of the world's leading suppliers of oxo-biodegradable plastic additive technology. Its flagship product, *Totally Degradable Plastic Additives* (TDPA), causes conventional plastics to degrade in a controlled manner when added to the plastic products' manufacturing process. EPI's TDPA additives are used in many applications with leading companies worldwide.

Polykar oxo-degradable garbage bags will have the following characteristics:

- 100% degradable garbage bags made from polyethylene with EPI's pioneering oxo-biodegradable additive technology, which has been recognized under the ASTM D 6954-04 guide
- The same quality, thickness and strength of our standard line of bags
- Made from post-industrial recycled polyethylene
- Fully recyclable bags
- Distinctive packaging and labelling
- No adverse toxicological effects or by-products
- Competitively priced

Information on EPI's TDPA technology can be found at www.epi-global.com

Polykar's price list for oxo-degradable garbage bags can be found at www.polykar.com
